Download Windows 11

(Current release: Windows 11 2025 Update I Version 25H2)

There are 3 options below for installing or creating Windows 11 media. Check out each one to determine the best option for you.

Before installing, check the [Windows release information status](#) for known issues that may affect your device. If you're running a prior version of Windows, see the [Upgrade to Windows 11:FAQ](#) for additional information.

Windows 11 Installation Assistant

This is the best option for installing Windows 11 on the device you're currently using. Click **Download Now** to get started.

Note: Windows 11 Installation Assistant doesn't run on Arm-based PCs; it only works for x64 processors.

Create Windows 11 Installation Media

If you want to perform a reinstall or clean install of Windows 11 on a new or used PC, use this option to download the media creation tool to make a bootable USB or DVD.

Note: Windows 11 media creation tool cannot be used to create installation media for Arm-based PCs; it can only create media for x64 processors.

Download Windows 11 Disk Image (ISO) for x64 devices

This option is for users that want to create a bootable installation media (USB flash drive, DVD) or create a virtual machine (.ISO file) to install Windows 11. This download is a multi-edition ISO which uses your product key to unlock the correct edition.

Windows 11 ISOs for Arm64 devices are available [here](#).

2.) While downloading, check the attachments and download WinDiskWriter for the processor your device has. Apple M chips are Apple Silicon, older Intel based MacBook are Intel!

3.) You might need to allow the app to run.

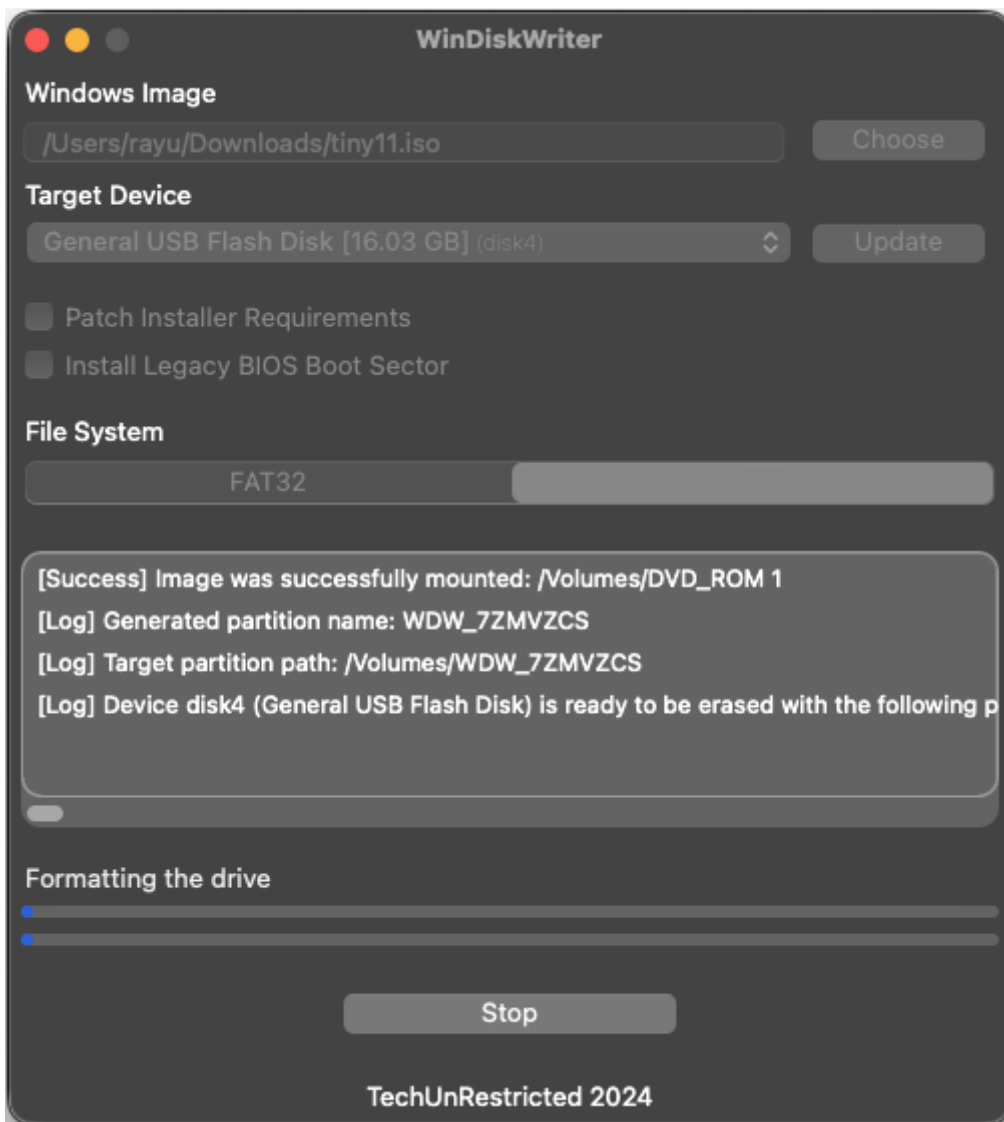

Open Settings > Privacy & Security > Scroll down until you see a message that an app was vblocked from running > Click allow > Confirm with your password > Run the app again

You should be seeing this:

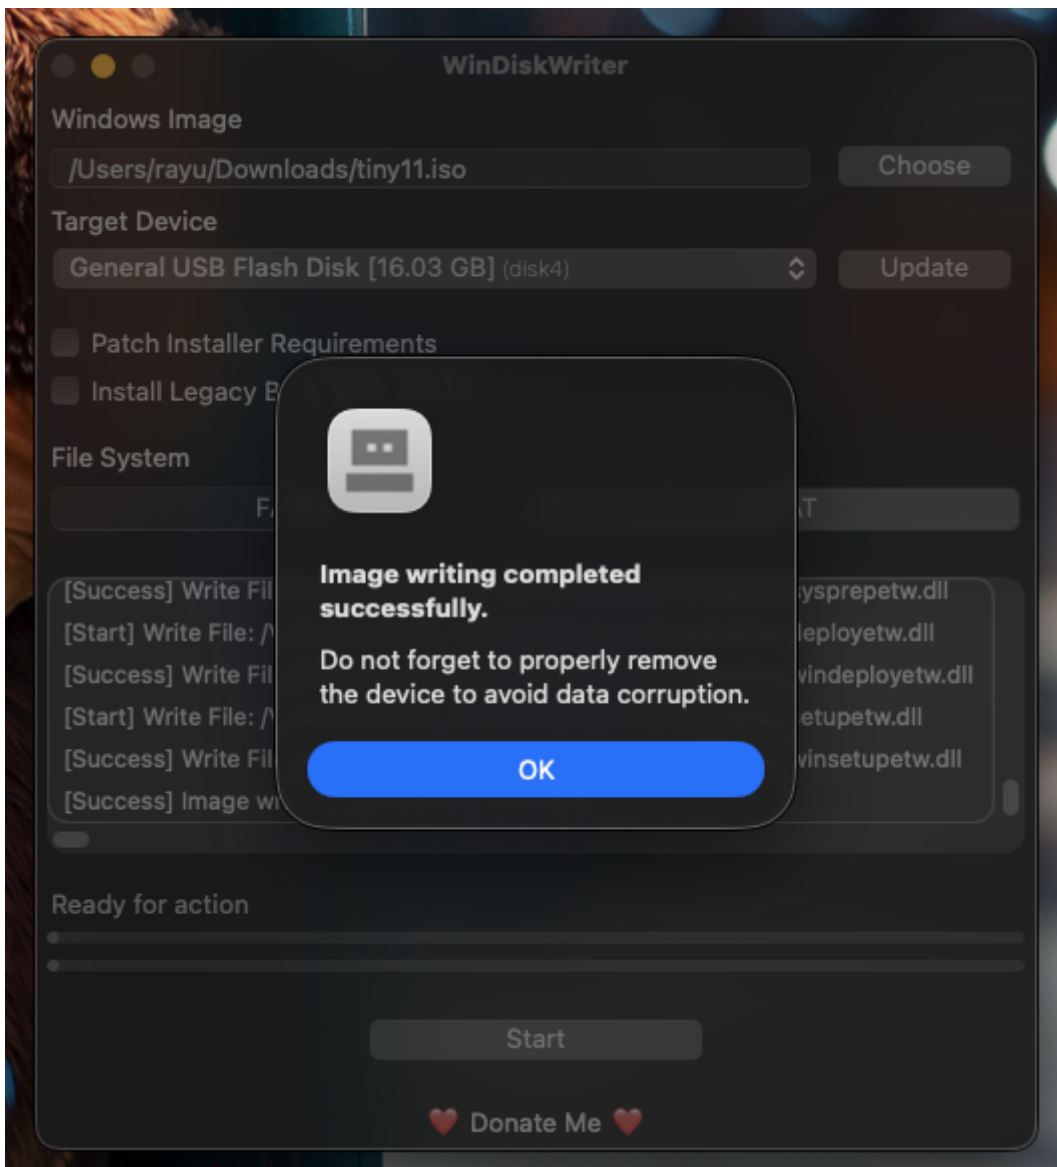

- Choose the downloaded Windows iso file
- Select the USB drive you want to flash it on (careful, USB hard drives might be detected as wlel. Double check please!)
- Use ExFAT as file system
- Press Start

This will take a while then:

When everything's done, you'll see this:

- Safely eject the flash drive
- Insert the flash drive to the target PC

Now, the next thing could be a bit tricky depending on the hardware manufacturer:

- Boot into the BIOS (usually, one of the F keys or DEL on the keyboard. Check for the hardware manufacturer!)
- Look where the boot devices are
- Select the USB drive and hit enter

Now the Windows image should load after a while

If you see a "Press any key or to boot from CD or DVD..." prompt, press any key.
